Notes

- The Inter-Tel Axxess does not support analog DID or Tie lines, but up to 48 can be supported via T1. The Axxess requires a PC application to provide true Call Accounting. A very limited built-in call accounting feature estimates the cost of each call. The cost accumulates and displays during each call, and prints in the SMDR information. The Axxess requires Axxessory Talk voice mail PC processor to support Night Service Auto Activation. The Axxess supports off-premise DKTs via dial up modem. This is a poor substitute for a permanent dedicated connection.
- Toshiba Strata CTX100 supports both 60-button and 20-button DSS Consoles, with higher capacities of the 20-button model. CTX100 maximum 8 simultaneous 8-party conferences, and maximum 20 simultaneous 3-party conferences. CTX100 maximum station speed dial is 100 per station, assignable in increments of 10, and total 1,080 per system.
- The Avaya Partner ACS maximum capacity is either 19 CO lines and 8 stations or 15 lines and 40 stations.
- The NEC Nitsuko Businesscom Digital System 01 has maximum capacity for 8x24 in the primary KSU. One expansion cabinet increases maximums to 16x48. Two expansion cabinets increases maximums to 24x72.
- The Panasonic DBS576HD supports 3-party conference as standard feature, or up to four simultaneous 8-party conference by adding a conference card that occupies a slot in the KSU. The DBS576HD supports door phones and door locks via a door phone adapter. Each combination of door phone and door opener requires one CO line port.
- The Samsung DCS 50si has one park zone for each CO line. The Samsung DCS 50si supports either 500 (standard) or 1,500 (optional) speed dial numbers. Up to 500 can be assigned to system speed dial. Up to 50 can be assigned per station.
- The Comdial DX-80 supports 1,000 system/station speed dial numbers, allocated 200 system speed dial and 50 per station speed dial.
